

COMPLETE REDESIGN GUIDE

Next-Gen 3D Portfolio Architecture & Prompts

The master workflow, technical stack, and generative AI prompt library to transform any standard developer portfolio into an immersive, high-converting 3D digital experience.

01. Kinetic 3D Celestial Core

WebGL Three.js canvas featuring gyroscopic orbital wireframes and responsive celestial particles responsive to user touch/cursor.

02. 16:9 Studio Broadcast Introduction

Interactive 1080p full widescreen self-introduction video with native voice playback, custom scrubber timeline, and zero-crop framing.

03. Scroll-Driven Competency Meters

Dynamic SVG circular gauges and animated linear proficiency bars that calculate and expand in real-time on scroll entry.

04. 3D Perspective Tilt Physics

Subtle, math-calculated 3D perspective transforms applied to project, service, and testimonial cards that react fluidly to pointer vectors.

The 5 Pillars of Next-Gen Portfolio Design

Standard flat portfolio websites built with generic templates fail to convert in 2026. Tech recruiters, clients, and collaborators spend an average of **15 seconds** on a personal website before deciding whether to interview or hire. To stand out, a portfolio must transcend a digital resume and deliver an **interactive product experience**.

PILLAR 1

Visual Authority & Obsidian Palette

Replaces washed-out grays with high-depth luxury dark shades: *Obsidian* (#05070A), *Midnight* (#0A0D14), and *Deep Space* (#111622) accented by radiant emerald phosphors (#1FDF64).

PILLAR 2

Real-Time 3D Interaction (Three.js)

Immediately captures visitor attention in the Hero with an interactive WebGL celestial particle sphere that moves with cursor physics and touch swipe gestures.

PILLAR 3

Human Presence via Broadcast Studio Video

Solves developer anonymity through a 10-second Full HD 16:9 studio video briefing where the developer welcomes visitors in voice, creating instant trust.

PILLAR 4

Scroll-Driven Dynamic Proof of Competence

Eliminates static percentage badges. Skills dynamically animate and fill (linear bars and circular SVG meters) as visitors scroll into view, demonstrating frontend polish.

PILLAR 5

Zero-Lag Performance & Micro-Interactions

Constructed on React 19 and Vite with hardware-accelerated CSS transforms. Sub-second build times, 60fps animations, responsive dual-theme support (Obsidian / Ceramic Light), and accessible mobile drawer navigation.

Tech Stack & System Architecture

LAYER	TECHNOLOGIES USED	PURPOSE IN ARCHITECTURE
Core Framework	React 19 + Vite 8.0	Instant HMR, production chunk splitting, single-page reactive DOM.
3D Graphics	Three.js (WebGL)	3D Celestial Gyroscope, orbital rings, procedural lighting, orbit physics.
Styling & Design System	Tailwind CSS 3.4 + Custom Config	Obsidian tokens, responsive grid, glassmorphic blur filters, custom utilities.
Animations & Physics	GSAP 3, AOS, Canvas 2D	Typewriter role switching, scroll-trigger reveals, particle vortex backdrop.
Interactive Media	Native HTML5 Video + Custom Audio Engine	16:9 uncropped broadcast briefing, non-blocking timeline slider, sound toggle.

LAYER	TECHNOLOGIES USED	PURPOSE IN ARCHITECTURE
Icons & Typography	Lucide React, React Icons (Fa), Google Fonts	Plus Jakarta Sans, Inter, JetBrains Mono vector font stacks.

SEC 03

Step-by-Step Transformation Workflow

Follow this structured 6-phase engineering workflow to migrate any standard portfolio into this high-end interactive theme without breaking existing content or data.

PHASE 01

Tailwind Obsidian Tokens

Configure custom color palette in `tailwind.config.js` with *midnight*, *evening*, *deep*, and *accent* tokens. Add glowing box-shadow presets.

PHASE 02

WebGL Kinetic Core (Hero)

Implement `Hero3DCanvas.jsx` using `Three.js` with an `IcosahedronGeometry` core, wireframe orbital torus rings, and 60fps drag physics.

PHASE 03

16:9 Broadcast Section

Integrate `Profile3DSection.jsx` with explicit 16:9 aspect ratio, uncropped object-contain framing, play-on-click video, and synchronized time slider.

PHASE 04

Dynamic Skill Counters

Build `Skills.jsx` with SVG circular gauges (`strokeDashoffset` transitions) and linear proficiency bars that count up on scroll intersection.

PHASE 05

3D Perspective Tilt Physics

Wrap project and service cards with `CardLayout.jsx` calculating `rotateX` and `rotateY` on `mousemove` for tactile 3D hover response.

PHASE 06

Glass Drawer & Dual Theme

Add slide-in navigation drawer with backdrop blur, active link indicators, and smooth theme toggle switching between Obsidian Dark and Ceramic Light.

CODE

Core Design Tokens (`tailwind.config.js`)

TAILWIND.CONFIG.JS — OBSIDIAN THEME TOKENS

JAVASCRIPT

```
module.exports = {
  darkMode: 'class',
  content: ['./index.html', './src/**/*.{js,ts,jsx,tsx}'],
  theme: {
    extend: {
      colors: {
        midnight: '#05070A', // Deep obsidian page background
        deep: '#0A0D14',     // Container background layer
        evening: '#111622',  // Card and elevated component background
        card: '#181F30',     // Interactive card hover surfaces
        accent: '#1FDF64',   // Phosphor emerald neon signature
        'accent-glow': '#10B981',
        snow: '#F8FAFC',     // High-contrast clean heading text
        silver: '#E2E8F0',   // Secondary readable body text
        'light-gray': '#94A3B8', // Muted subtitles and technical meta
      },
      boxShadow: {
        'glow-accent': '0 0 40px rgba(31, 223, 100, 0.25)',
        'glass-card': '0 25px 50px -12px rgba(0, 0, 0, 0.75)'
      }
    }
  }
};
```

Best Practice Tip: Always decouple portfolio data (projects, credentials, recommendations) into dedicated data objects or constants. This keeps components clean, reusable, and allows rapid future updates.

Use these exact, battle-tested prompt templates in AI video tools (Runway Gen-3, Kling, Google Flow, Luma), voice generators (ElevenLabs), and AI coding assistants (Claude, ChatGPT, Antigravity) to produce assets matching this aesthetic.

PROMPT 01: AI STUDIO BROADCAST VIDEO GENERATION (KLING 1.5 / RUNWAY GEN-3 / VEO 2) Cinematic 4K

studio broadcast shot of a sharp, stylish young South Asian male computer engineering student and creative developer in his early 20s with neat short wavy dark hair and trimmed beard. He is sitting behind a professional broadcast news desk in front of a Shure microphone on a RØDE boom arm. On the desk is an Apple MacBook, ceramic coffee mug, and a stack of engineering textbooks. The background features a deep navy obsidian broadcast studio with warm shelf lighting, blurred monitors, indoor plants, and a glowing University architectural emblem on the wall. The speaker delivers a warm, confident introduction directly into the camera with natural expressive lip movement, subtle hand gestures, and professional anchor posture. Photorealistic, 8k resolution, 35mm anamorphic lens, shallow depth of field, warm cinematic key lighting.

PROMPT 02: 10-SECOND HIGH-CONVERSION VOICE SCRIPT (ELEVENLABS / VOICE AI) Voice Settings: Voice:

Adam or *Marcus* • Stability: 0.65 • Clarity: 0.85 • Style Exaggeration: 0.10

[0:00 - 0:03] "Welcome to my portfolio! I'm MFA Naseef Sharaf,"

[0:03 - 0:07] "a Computer Engineering student at the University of Peradeniya and Creative Developer."

[0:07 - 0:10] "Explore my work, and let's build something exceptional together."

PROMPT 03: VISUAL THEME & COVER WALLPAPER (MIDJOURNEY V6.1 / FLUX PRO) A futuristic creative

developer laboratory banner, sleek dark obsidian aesthetic, volumetric teal and neon emerald green ambient lighting, holographic engineering wireframes, blurred code syntax on floating glass displays, minimalist luxury technology workspace, ultra-clean composition, 16:9 ratio, 8k, Octane Render style, high dynamic range --ar 16:9 --style raw --v 6.1

PROMPT 04: AI CODING ASSISTANT REFACTOR PROMPT (CLAUDE 3.7 / CHATGPT 4O) I want to refactor my

existing React portfolio into a luxury obsidian 3D theme inspired by Naseef Sharaf's architecture. Please update my Tailwind config with colors #05070A, #0A0D14, #111622, #181F30, and accent #1FDF64. Create a 3D Three.js kinetic celestial canvas for the Hero, an uncropped 16:9 video section for my broadcast self-introduction with custom play/pause and time slider, dynamic SVG circular proficiency meters that fill on scroll, and a 3D perspective tilt physics wrapper for all cards. Preserve all my existing projects, resume data, and contact links.

When sharing your redesigned portfolio on LinkedIn, Twitter/X, and Instagram, frame it around **engineering craftsmanship** and provide this PDF blueprint as a high-value lead magnet.

VIRAL HOOK TEMPLATE

LinkedIn / X(Twitter) Post Template

Most developer portfolios look like identical resume templates.

I spent the past week reimagining mine from the ground up:

- ⚡ 3D Kinetic Celestial Core powered by Three.js (WebGL)
- 🎙 16:9 Full HD Broadcast Self-Introduction with live voice playback
- 📄 Scroll-driven dynamic competency gauges & SVG percentage rings
- 💎 Luxury Obsidian & Emerald design system with 3D perspective tilt physics

The entire project is built on React 19 + Vite with zero lag.

I packaged the entire workflow, architecture breakdown, and exact AI prompts into a 5-page PDF Blueprint.

Drop a comment below with "BLUEPRINT" and I'll send you the free PDF + GitHub repo link! 📄

#webdevelopment #reactjs #threejs #portfolio #creativecoding #uiux #engineering

STRATEGY 1

Multi-Slide Carousel (PDF)

Upload this 5-page PDF directly as a document post on LinkedIn. Document posts receive **3x more algorithm reach** than standard links.

STRATEGY 2

15-Second Screen Recording

Pair the post with a crisp 1080p screen recording showing: (1) 3D celestial drag in the Hero, (2) Playing the broadcast video, (3) Smooth scroll down to animated skill rings.

Explore the Complete Codebase on GitHub

Full source code, Three.js canvas shaders, custom controls, and Tailwind configurations.
